

DEFENDA™

ADVANCED SUPERYACHT FENDERS

Design

Continuous design innovation has ensured that our products represent the very best fender solutions for large yachts.

Technology

High-tensile materials, laser cutting and advanced seam welding help create our incredibly strong yet lightweight fenders.

Function

Significantly reduced weight and deflated volume make our inflatable fenders easy to store and rapid to deploy.

Developed through extensive research and testing, our superyacht fenders are the most advanced available.

Next-generation MilSpec fabric and state-of-the-art manufacturing techniques deliver outstanding performance.

Our passion for innovation and attention to detail ensure that **DEFENDA™** products meet the exacting requirements of a highly specialised industry.

Unbeatable strength

DEFENDA™ are manufactured in Europe, using a Military grade high-tensile polyester laminate, providing unbeatable strength and abrasion resistance.

Available in a wide range of standard sizes, custom requirements can also be made to order.

DEFENDA™ Features

Less bulky than other fenders when deflated; a DEFENDA™ is swiftly inflated via a D7 valve.

Twin reinforcement bands provide additional strength and abrasion resistance on our fenders.

Laser cut panels are high-frequency welded, creating a molecular bond. Seams are stronger than the material itself and guaranteed not to leak.

Double layer webbing loops provide secure attachment points that won't damage paintwork. Larger fenders are equipped with three-point fixings as standard.

DEFENDA™

Rigorously tested by an independent laboratory. Take a look for yourself:

**10 YEAR
GUARANTEE**

A range of quality accessories

ELECTRIC INFLATORS

DEFENDA™ approved inflators, providing high volume airflow to quickly inflate fenders, RIBs and other inflatable structures.

FENDASKIN™

A tight-fitting Neoprene cover, offering a sleek appearance and enhanced functionality. Only available in Black.

ACRYLIC FENDER COVERS

Traditional loop-knit Acrylic fender covers are durable, yet soft enough to protect topsides from fender scuff. Available in a wide range of UV stable colours.

DEFENDA™

FENDER BRIDLE

The neatest way to join a fender line to one of our larger fenders, using custom made strops and a sophisticated ball-raced swivel, that will still rotate under extreme load.

FENDER HOOKS

Custom made in Europe, our fender hooks are available in Stainless Steel and Carbon Fibre, with a wide range of polished, satin or leather-clad finishes. Lined with rot-resistant sheepskin and equipped with premium cleats and fairleads, each fender hook is designed to provide maximum protection and convenience when hanging fenders from a rail or bulwark.

FENDER LINES

Braid on braid Polyester fender lines, with a spliced loop to one end, available in a range of diameters and lengths.
